# Goals

- Architecture and Testing Standards
  - Ability to acquire consistent and comparable test results across providers and technologies
  - Adaptable architecture to support different measurement process models
    - Regulatory, ISP, consumer
  - Flexibility, modularity, and cost efficiency
  - Scalable
  - Reasonable timeframes for implementation
  - End to end model
- Requirement for test suites
  - Supportable across broad range of devices and platforms
  - Metrics that support analysis of service and application QOS
  - Metrics that consistent with development of end to end model of QOS

Draft
